

MANDIK®

**VARIABLE AIR VOLUME
CONTROLLER**

RPM-V

These technical specifications state a row of manufactured sizes and models of air volume controller (further only controller) RPM-V. It is valid for production, designing, ordering, delivery, assembly and operation.

II. GENERAL INFORMATION

1. Description

1.1. The air volume controllers are meant for systems with a variable air volume that is used for input or output air. The required amount of air that is taken into the individual rooms or working areas is variable with respect to time and can be changed according to momentary need when the controllers are installed. Total power of air-conditioning system can be lower. This variable systems enable a more economical operation air-conditioning systems and while ensuring individual well-being on the premises setting.

The controller consists of the body of the controller with a control blade and pressure probes for determining the through-flow of air. An compact controller is affixed to the body for controlling the control blade.

Pic. 1 Controller RPM-V Belimo

**Pic. 2 Controller RPM-V MANDÍK PROFI-LINE
(actuating mechanism Gruner)**

1.2. Controller characteristics

- Type of regulation:
 - control of air flow
 - control of pressure in the duct
 - control of pressure in the room
- Nominal size DN 80 ÷ DN 630
- Length L = 450 / 600 mm according to nominal size
- Tightness acc. to EN 1751 External casing leakage class C
- Air flow volume Tightness through the damper blade: class 4
- Accuracy 18 ÷ 7 900 m³/h (for 12m/s is max. Air flow vol. 13 500 m³/h*)
- Air-velocity ± 8 % for velocity up to 3 m/s and ± 5 % for higher velocity.
- Standard set-up is in range from min. 1 m/s to 7 m/s by Belimo or Gruner actuators, see in 5.1.1 and 5.2.1. tables.

1.3. Working conditions

The faultless functioning of the controllers is ensured under the following conditions:

- a) maximum speed of air flow 7 m/s*
- b) maximum pressure in the duct 1000 Pa
- c) the air circulation in the whole controller section must be secured as steady on whole surface - see point 4.1.

Controllers are designed for macroclimatic areas with mild climate according to EN 60 721-3-3.

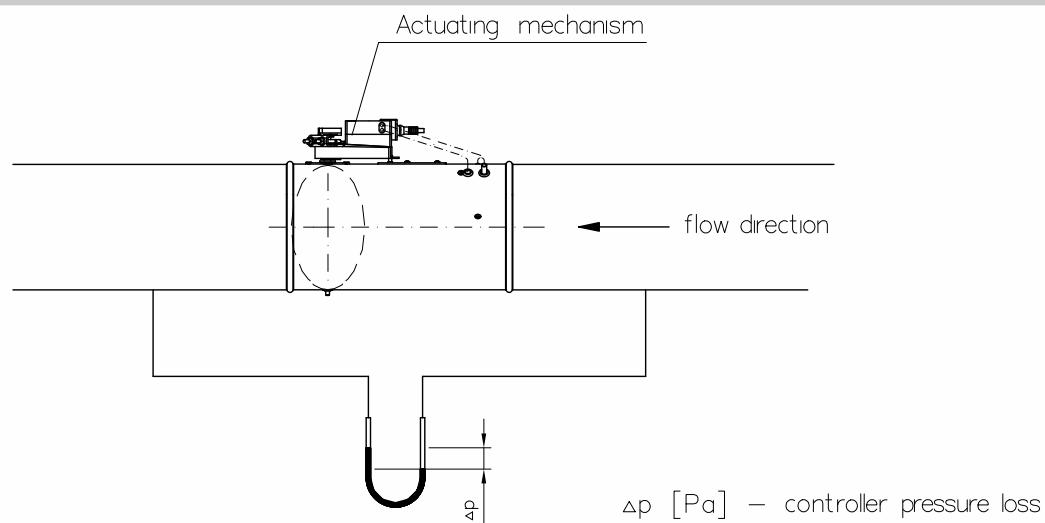

Controllers are suitable for systems without abrasive, chemical and adhesive particles.

Temperature in the place of installation is permitted to range from 0°C to + 50°C.

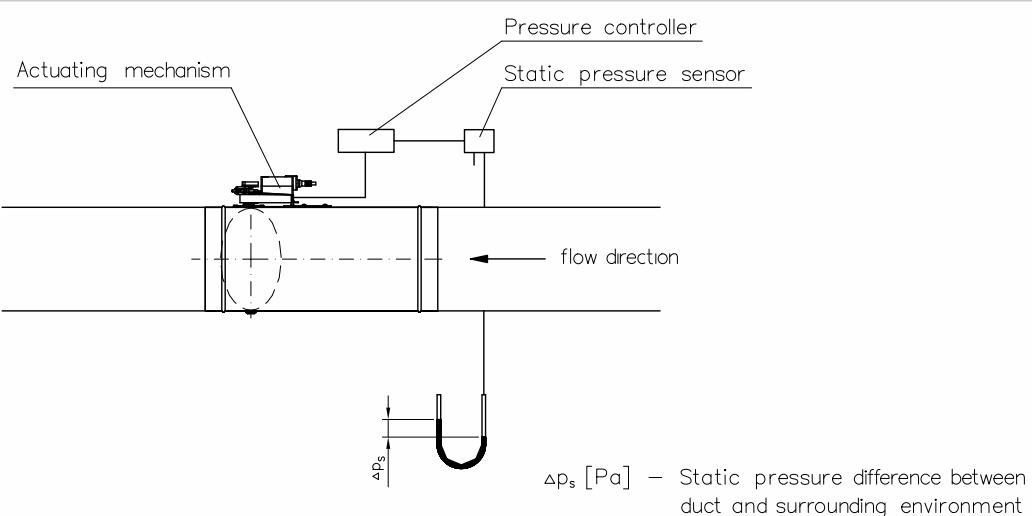

*** Set the controller to 12 m/s, it is necessary to discuss with the manufacturer!**

2.1 Compact regulator BELIMO - Air flow regulator

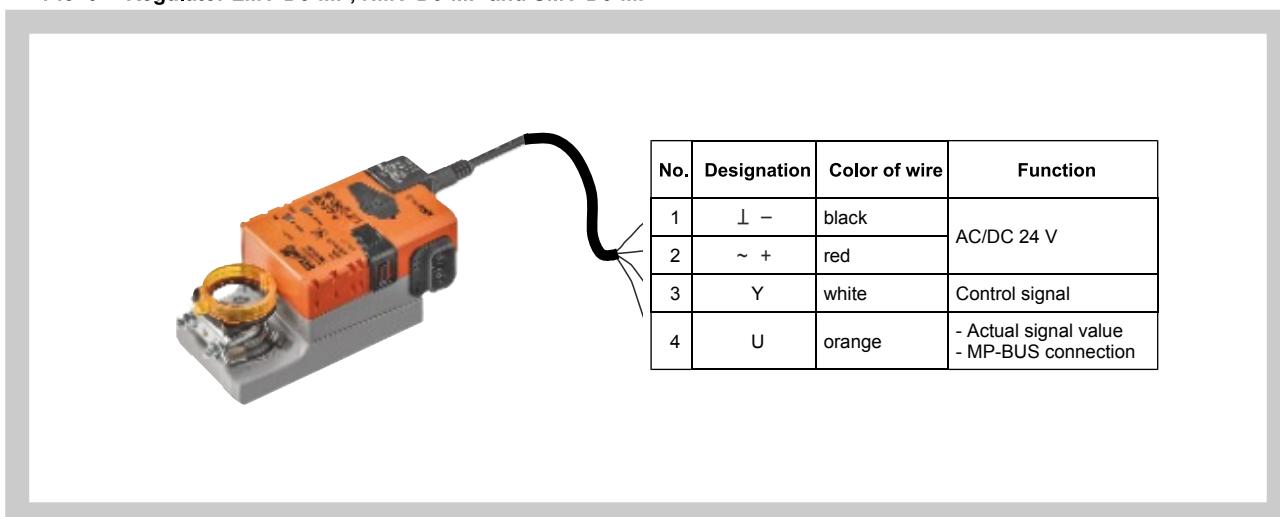

A pressure sensor, digital VAV controller and damper actuator all in one, providing a compact solution with a different communication possibilities.

The regulator is used for regulation of air flow, it works on the principle of dynamic measurement. It compares the measured differential pressure with the set point, in case of deviation it rotates the damper blade until the set point is reached.

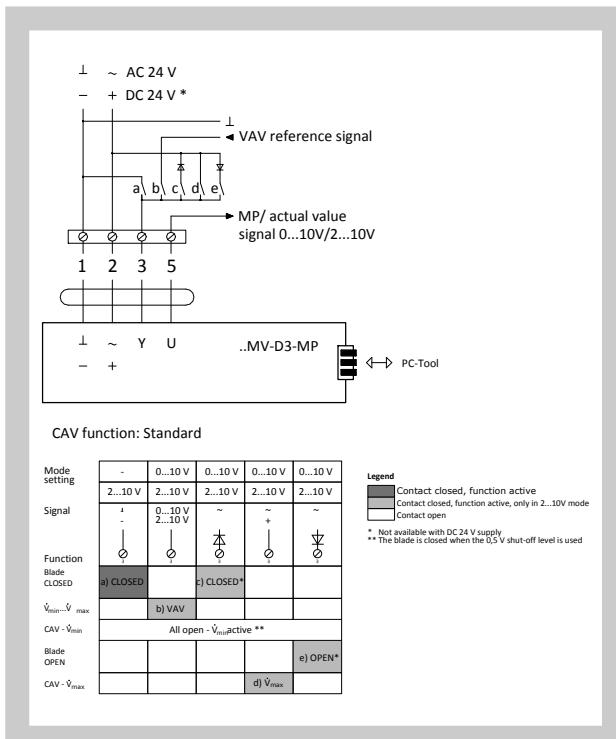

Regulators are divided in accordance with the type of control:

- LMV-D3-MP, NMV-D3-MP and SMV-D3-MP for control with signal 0(2)...10 V or protocol MP-BUS
- LMV-D3-MOD and NMV-D3-MOD for control with signal 0(2)...10 V or using the protocol Modbus RTU, BACnet or MP-BUS
- LMV-D3-KNX and NMV-D3-KNX for control with signal 0(2)...10 V or using protocol KNX
- LMV-D3-LON and NMV-D3-LON for control with signal 0(2)...10 V or using protocol LON

VAV-Regulator	LMV-D3...				NMV-D3...				SMV-D3...				
Communication	MP	MOD	KNX	LON	MP	MOD	KNX	LON	MP				
Power voltage	AC/DC 24 V, 50/60 Hz												
Functional range	AC 19,2...28,8 V / DC 21,6...28,8 V												
Dimensioning	3,5 VA	4 VA		4,5 VA	5 VA		6,5 VA	5,5 VA					
	(max. 8 A @ 5 ms)												
Power input	2 W		2,5 W	3 W		4,5 W	3 W						
Torque	5 Nm				10 Nm				20 Nm				
Adjustment ranges													
\dot{V}_{nom}	OEM specific nominal volumetric flow setting, suitable for VAV unit												
\dot{V}_{max}	20...100% $\geq \dot{V}_{\text{nom}}$												
\dot{V}_{min}	0...100% $\leq \dot{V}_{\text{nom}}$												
Standard control													
VAV mode for reference value input Y (connection 3)	<ul style="list-style-type: none"> - DC 2...10 V/ (4...20mA resistance 500Ω) - DC 0...10 V/ (0...20mA resistance 500Ω) - adjustable DC 0...10 V } (Input impedance min. 100 kΩ)												
Mode for actual value signal U₅ (connection 5)	<ul style="list-style-type: none"> - DC 2...10 V - DC 0...10 V - adjustable: vol. flow, blade position or diff. pressure } (max. 0,5 mA)												
CAV operating modes (constant volumetric flow)	Closed / \dot{V}_{min} / \dot{V}_{max} / open* (* only with AC 24V supply)												
Connection	cable 6 x 0,75 mm ² (for MP communication cable 4 x 0,75 mm ²)												
Protective category	III (Safety extra-low voltage)												
Ambient humidity	5 ... 95% r.h., non-condensing (in accordance with EN 60730-1)												
Non-operating temperature	-40...+80 °C												
Weight	0,5 kg				0,7 kg				0,83 kg				

2.2 Regulator VRD3 BELIMO universal - Air flow regulator

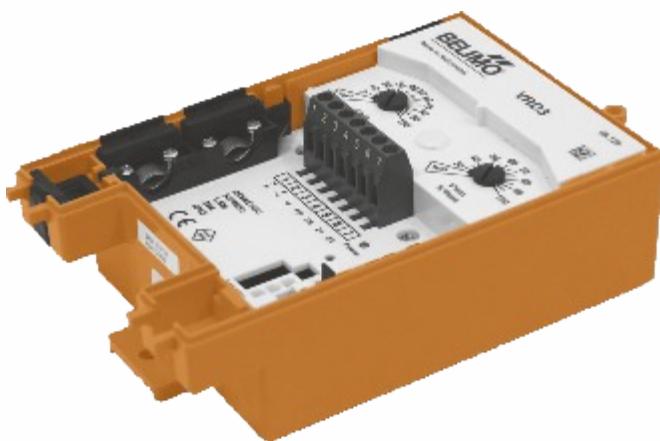

Pressure sensor (with 300 Pa range) and universal VAV Regulator VRD3 (controlled with signal 0 / 2-10V) in one housing, plus separate actuator.

The regulator is used for regulation of air flow, it works on the principle of dynamic measurement. It compares the measured differential pressure with the set point, in case of deviation it rotates the damper blade until the set point is reached.

Regulators are divided in accordance with the type of actuator:

- LM24A-V, NM24A-V and SM24A-V without return spring
- LF24-V and SF24A-V with return spring

Torque at rated voltage	min. 5 Nm	min. 10 Nm	min. 20 Nm	min. 4 Nm	min. 20 Nm
Sense of rotation	L / R (Reversible with switch)		L / R (optional by mounting)		
Adjustment time for > 90° (resp. 95°)	150 s		150 s return spring 20 s	150 s return spring 20 s	
Degree of protection	IP 54				
Protective category	III (Safety extra-low voltage)				
Ambient temperature	-30...+50 °C				
Storage temperature	-40...+80 °C				
Noise level	max. 35 dB(A)	max. 45 dB(A)	max. 50 dB(A)	max. 62 dB(A)	

2.3 Regulator VRP-M BELIMO universal - Air flow or pressure regulator

Pressure sensor, universal VAV Regulator VRP-M (controlled by 0 / 2-10 V signal or via MP-BUS) and separate actuator.

The regulator is used for regulation of air flow (VAV / CAV) or for pressure regulation (STP), in accordance with the connected sensor works on the principle of dynamic or static measurement. It compares the measured differential pressure with the set point, in case of deviation it rotates the damper blade until the set point is reached.

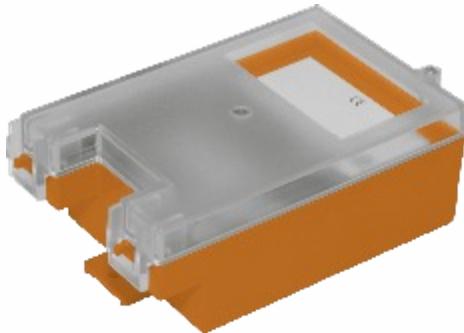

Regulators are divided in accordance with the type of actuator:

- NM24A-V-ST, LMQ24A-SRV-ST and NMQ24A-SRV-ST without return spring
- SF24A-V-ST with return spring

Furthermore, the regulators are divided in accordance with the used pressure sensor:

- VFP-100, for static pressure measurement in the range 0-100 Pa
- VFP-300, for static pressure measurement in the range 0-300 Pa
- VFP-600, for static pressure measurement in the range 0-600 Pa
- VFD-3, for dynamic pressure measurement in the range 0-600 Pa

2.4 Regulators VRP, VRP-STP BELIMO universal - Air flow or pressure regulators

Pressure sensor, universal VAV Regulator VRP (controlled by 0 / 2-10 V) and actuator. Regulators VRP-STP are without the possibility of communication.

The regulator is used for regulation of air flow VRP or for pressure regulation (VRP-STP), connected sensors work on the principle of static measurement.

It compares the measured differential pressure with the set point, in case of deviation it rotates the damper blade until the set point is reached.

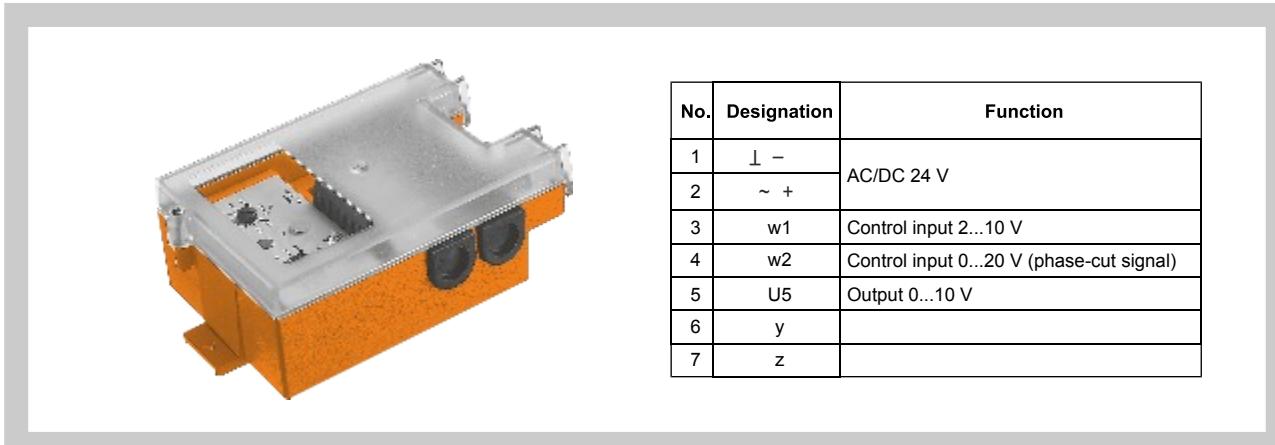

Regulators are divided in accordance with the type of actuator:

- LM24A-V, NM24A-V and SM24A-V without return spring (viz. Tab. 2.2.1)
- LF24-V and SF24A-V with return spring (viz. Tab. 2.2.1)

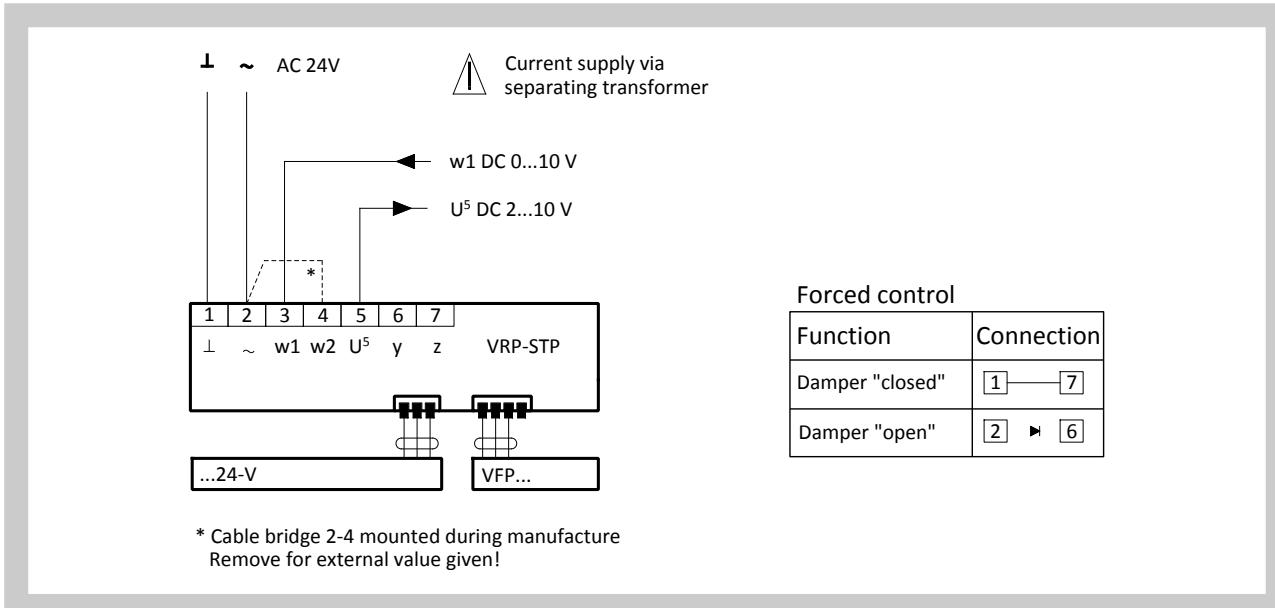

Furthermore, the regulators are divided in accordance with the used pressure sensor:

- VFP-100, for static pressure measurement in the range 0-100 Pa (viz. Tab. 2.3.2)
- VFP-300, for static pressure measurement in the range 0-300 Pa (viz. Tab. 2.3.2)
- VFP-600, for static pressure measurement in the range 0-600 Pa (viz. Tab. 2.3.2)

Pic. 24 Controller with functionality control of pressure in the duct or room

Tab. 2.4.1. Technical parameters of regulators VRP, VRP-STP

Power voltage	AC 24 V, 50/60 Hz
Functional range	AC 19,2...28,8 V
Dimensioning	2,6 VA (including sensor VFP..., without actuator)
Power input	1,3 W (including sensor VFP..., without actuator)
Control variable w1	DC 2...10 V @ input resistance 100 kΩ
Working range	DC 2...10 V
Actual value signal U₅	DC 2...10 V @ max. 5 mA (the linear signal corresponds 0...100% Δp)
Adjustment ranges	
• control value	25...100% FS sensor (factory setting = 100%. Example VFP-300Pa=100%)
• requested value	30...100% from the set control value Δp
Connection	screw clamps for 2 x 1,5 mm ²
Protective category	III (Safety extra-low voltage)
Degree of protection	IP 42
Ambient temperature	0...+50 °C
Storage temperature	-20...+80 °C
Weight	0,4 kg (without pressure sensor)

2.5 PROFI-LINE regulator GRUNER - Air flow regulator

A pressure sensor, digital VAV controller and damper actuator all in one, providing a compact solution with a different communication possibilities.

The regulator is used for regulation of air flow, it works on the principle of dynamic or static measurement.

It compares the measured differential pressure with the set point, in case of deviation it rotates the damper blade until the set point is reached.

Regulators based on the principle of dynamic measurement are divided in accordance with the type of control:

- 227VM-024-05(-MP), 227VM-024-10(-MP) or 227VM-024-15(-MP) for control with signal 0(2)...10 V, or 0(4)...20 mA, (optional Modbus), with range 0...250 Pa

Regulators based on the principle of static measurement are divided in accordance with the type of control and sensor range:

- 227VM-024-05-DS1(-MP), 227VM-024-10-DS1(-MP) or 227VM-024-15-DS1(-MP) for control with signal 0(2)...10 V or 0(4)...20 mA (optional Modbus), with range 0...100 Pa
- 227VM-024-05-DS3(-MP), 227VM-024-10-DS3(-MP) or 227VM-024-15-DS3(-MP) for control with signal 0(2)...10 V or 0(4)...20 mA (optional Modbus), with range 0...300 Pa
- 227VM-024-05-DS6(-MP), 227VM-024-10-DS6(-MP) or 227VM-024-15-DS6(-MP) for control with signal 0(2)...10 V or 0(4)...20 mA (optional Modbus), with range 0...600 Pa

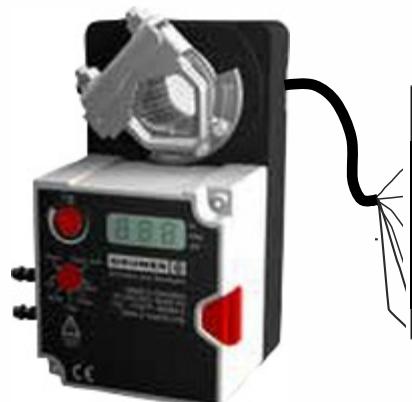

Note: Regulators marked at the end -MP, eg 227VM-024-05-MP or 227VM-024-05-DS1-MP, have the same functions as regulators without this designation, in addition they have the possibility of Modbus communication.

Output signal U	- DC 0(2)...10 V, max. 0,5 mA		
Connection	cable 1m, 4 x 0,75 mm ² (for regulators with Modbus 6 x 0,75 mm ²)		
Protective category	III (Safety extra-low voltage)		
Ambient humidity	95% rH, non-condensing (in accordance with EN 60730-1)		
Ambient temperature	0...+50 °C		
Storage temperature	-40...+80 °C		
Noise level	< 35 dB		
Weight	0,44 kg	0,46 kg	0,46 kg

Note: Figures 23-26 and Table 2.5.1 apply to controllers operating on the principle of both dynamic and static measurement, as well as air flow control (Chapter 2.5) and pressure control (Chapter 2.6).

2.6 PROFI-LINE regulator GRUNER - Pressure regulator

A pressure sensor, digital VAV controller and damper actuator all in one, providing a compact solution with a different communication possibilities.

The regulator is used for pressure regulation, it works on the principle of dynamic or static measurement.

It compares the measured differential pressure with the set point, in case of deviation it rotates the damper blade until the set point is reached.

Regulators based on the principle of dynamic measurement are divided in accordance with the type of control:

- 227PM-024-05(-MP), 227PM-024-10(-MP) or 227PM-024-15(-MP) for control with signal 0(2)...10 V, or 0(4)...20 mA, (optional Modbus), with range 0...300 Pa

Regulators based on the principle of static measurement are divided in accordance with the type of control and sensor range:

- 227PM-024-05-DS1(-MP), 227PM-024-10-DS1(-MP) or 227PM-024-15-DS1(-MP) for control with signal 0(2)...10 V or 0(4)...20 mA (optional Modbus), with range 0...100 Pa
- 227PM-024-05-DS3(-MP), 227PM-024-10-DS3(-MP) or 227PM-024-15-DS3(-MP) for control with signal 0(2)...10 V or 0(4)...20 mA (optional Modbus), with range 0...300 Pa
- 227PM-024-05-DS6(-MP), 227PM-024-10-DS6(-MP) or 227PM-024-15-DS6(-MP) for control with signal 0(2)...10 V or 0(4)...20 mA (optional Modbus), with range 0...600 Pa

Note: Regulators marked at the end -MP, eg 227PM-024-05-MP or 227PM-024-05-DS1-MP, have the same functions as regulators without this designation, in addition they have the possibility of Modbus communication.

Similar to Chapter 2.5, Figures 23-26 and Table 2.5.1 apply to all of these embodiments.

2.7 Regulator GRUNER universal - Air flow regulator

GUAC controller and pressure sensor in one housing, plus separate actuator.

The regulator is used to control the air flow, in accordance with the connected sensor works on the principle of dynamic or static measurement.

It compares the measured differential pressure with the set point, in case of deviation it rotates the damper blade until the set point is reached.

Regulators are divided according to the type of pressure sensor and type of communication:

- GUAC-DM3(-MP) for control with signal 0(2)...10 V or 0(4)...20 mA (optional Modbus), for dynamic pressure measurement in the range 0...300 Pa
- GUAC-SM3(-MP) for control with signal 0(2)...10 V or 0(4)...20 mA (optional Modbus), for static pressure measurement in the range 0...300 Pa

Furthermore, the regulators are divided in accordance with the used actuator:

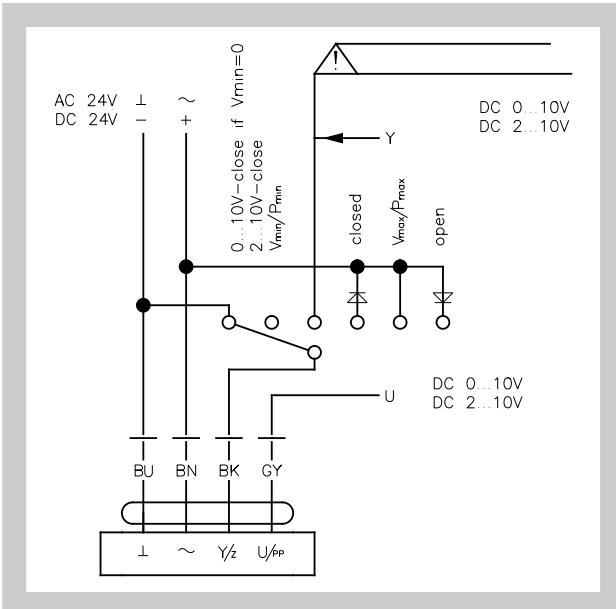

- 227C-024-05-V/ST06, 227C-024-10-V/ST06 and 227C-024-15-V/ST06 without return spring
- 341C-024-05-V/ST06, 361C-024-10-V/ST06 and 361C-024-15-V/ST06 with return spring

2.8 Regulator GRUNER universal - Pressure regulator

GUAC controller and pressure sensor in one housing, plus separate actuator.

The regulator is used for pressure regulation, in accordance with the connected sensor works on the principle of dynamic or static measurement.

It compares the measured differential pressure with the set point, in case of deviation it rotates the damper blade until the set point is reached.

Regulators are divided according to the type of pressure sensor and type of communication:

- GUAC-PM1(-MP) for control with signal 0(2)...10 V or 0(4)...20 mA (optional Modbus), for static pressure measurement in the range 0...100 Pa
- GUAC-PM3(-MP) for control with signal 0(2)...10 V or 0(4)...20 mA (optional Modbus), for static pressure measurement in the range 0...300 Pa
- GUAC-PM6(-MP) for control with signal 0(2)...10 V or 0(4)...20 mA (optional Modbus), for static pressure measurement in the range 0...600 Pa
- GUAC-DM3(-MP) for control with signal 0(2)...10 V or 0(4)...20 mA (optional Modbus), for dynamic pressure measurement in the range 0...300 Pa

Furthermore, the regulators are divided in accordance with the used actuator:

- 227C-024-05-V/ST06, 227C-024-10-V/ST06 and 227C-024-15-V/ST06 without return spring
- 341C-024-05-V/ST06, 361C-024-10-V/ST06 and 361C-024-15-V/ST06 with return spring

Similar to Chapter 2.7, figures 27-31 and Tab. 2.7.1 and 2.7.2 apply to all these embodiments

2.9 Compact regulator Siemens - Air flow regulator

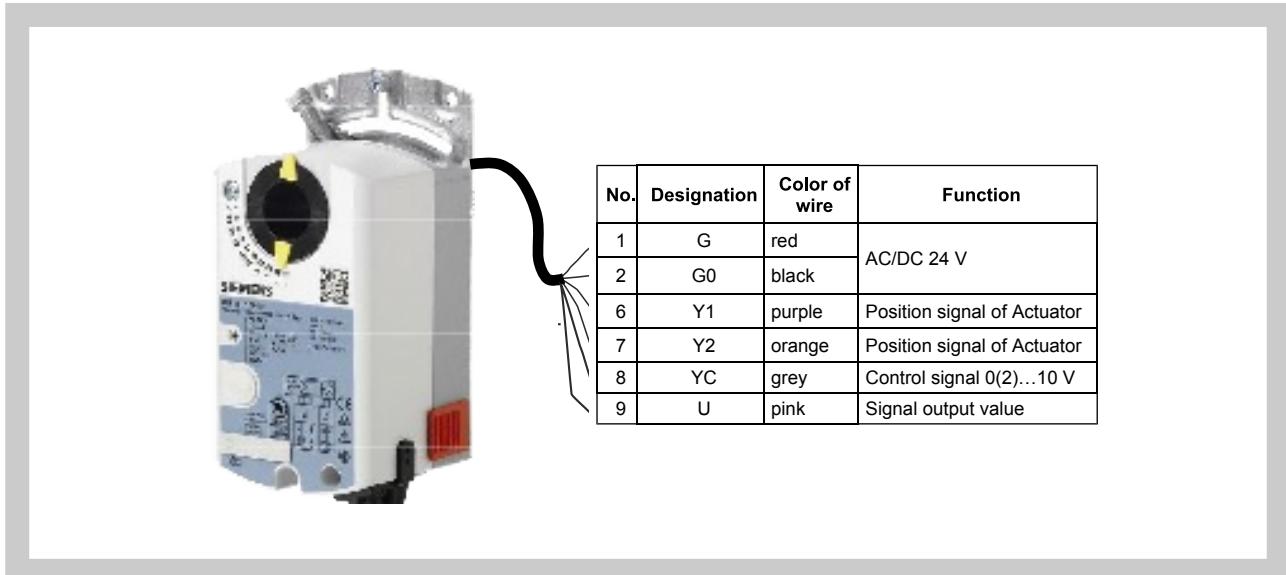

A pressure sensor, digital VAV controller and damper actuator all in one, providing a compact solution with a different communication possibilities.

The regulator is used for regulation of air flow, it works on the principle of dynamic measurement. It compares the measured differential pressure with the set point, in case of deviation it rotates the damper blade until the set point is reached.

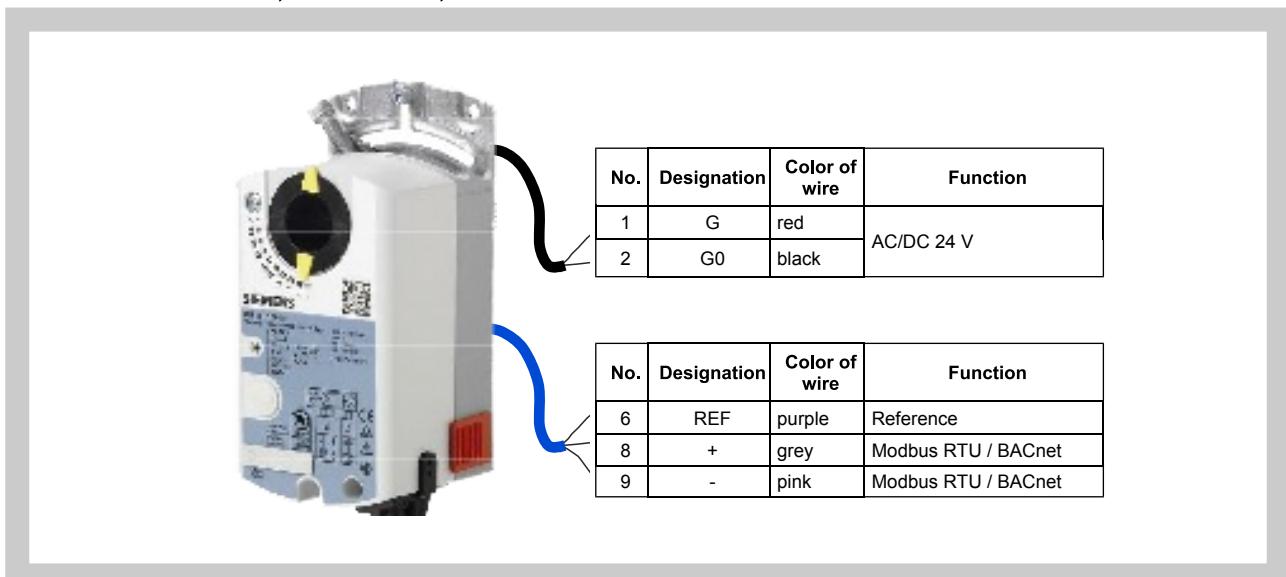

Regulators are divided in accordance with the type of control:

- GDB181.1E/3 and GLB181.1E/3 for control with signal 0(2)...10 V
- GDB181.1E/BA and GLB181.1E/BA using the protocol BACnet
- GDB181.1E/KN and GLB181.1E/KN using the protocol KNX
- GDB181.1E/MO and GLB181.1E/MO using the protocol Modbus

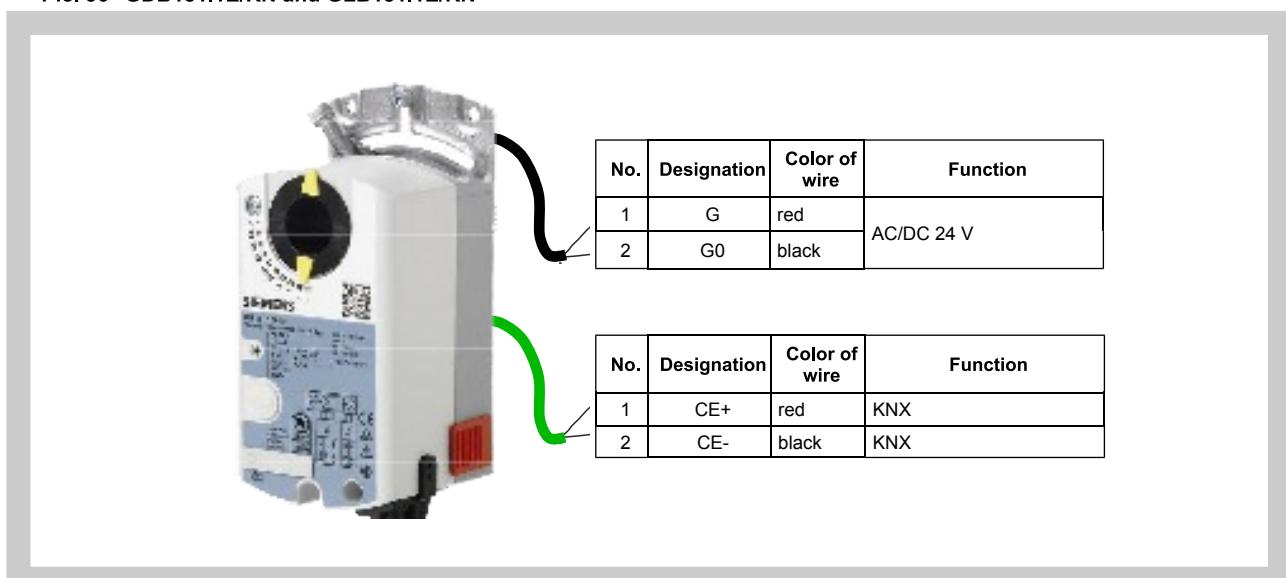

Pic. 34 GDB181.1E/3 and GLB181.1E/3

6. Determination of actual air volume

7.1. Air volume value is determined by means of the computation from the measured value U_5 .

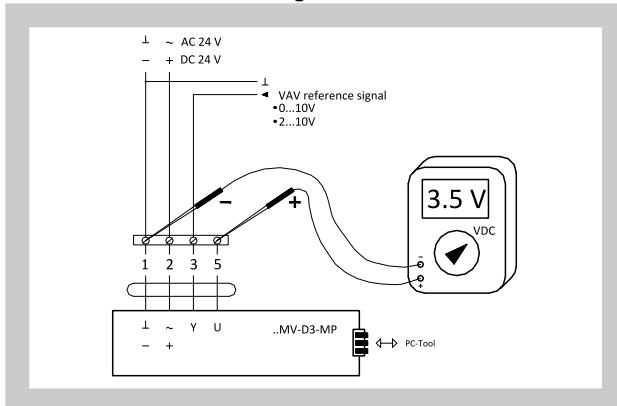

Sample for the operating mode 2...10 V

$$\dot{V} = \frac{U_5 - 2,0}{8} \cdot V_{\text{nom}}$$

Sample for the operating mode 0...10 V

$$\dot{V} = \frac{U_5 \cdot V_{\text{nom}}}{10}$$

Pic. 42 Determination of the actual value of U_5 by means of a voltage meter

Example: Operating mode 2...10 V

Searched for: actual air volume

Voltage measured on U_5 : 3,5 V

$$V_{\text{nom}} = 2800 \text{ m}^3 \cdot \text{h}^{-1}$$

$$\dot{V} = \frac{3,5 - 2,0}{8} \cdot 2800 = 525$$

Actual air volume is $525 \text{ m}^3 \cdot \text{h}^{-1}$.

Example: Operating mode 0...10 V

Searched for: actual air volume

Voltage measured on U_5 : 3,5 V

$$V_{\text{nom}} = 2200 \text{ m}^3 \cdot \text{h}^{-1}$$

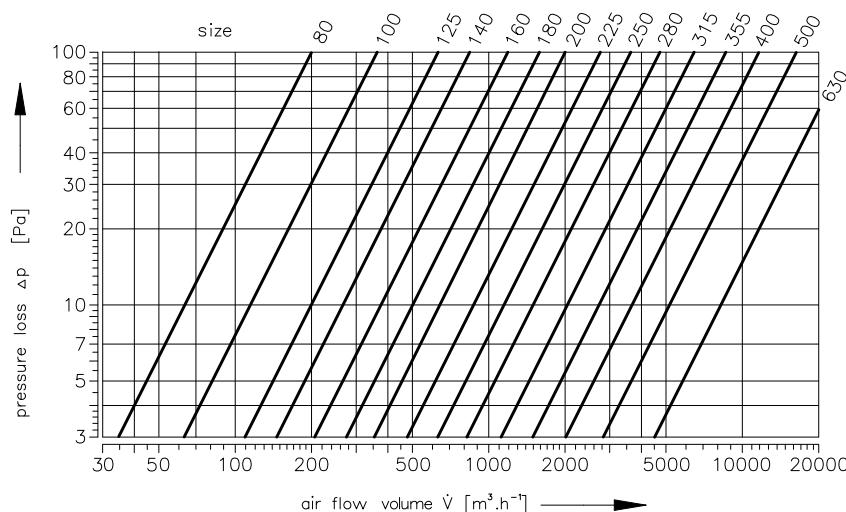

$$\dot{V} = \frac{3,5 \cdot 2200}{10} = 770$$

Actual air volume is $770 \text{ m}^3 \cdot \text{h}^{-1}$

7. Pressure loss

7.1. Pressure losses

Diagram 7.1.1. Pressure losses (the values are valid when the damper of the controller is completely open)

8. Noise data

8.1. Air-regenerated Noise

The noise arising due to the flow of air volume controller is listed in the following tables Tab. 8.1.1. - Tab. 8.1.4.

\dot{V} [$\text{m}^3 \cdot \text{h}^{-1}$] - air flow volume

L_{WA} [dB(A)] - total level of acoustic power

Δp_{st} [Pa] - pressure differential

corrected by filter A

L_w [dB/Okt.] - level of acoustic power in the octave band

f_m [Hz] - mean frequencies in the octave bands

Tab. 8.1.1. Sound power level inside the pipeline at pressure difference 50 Pa

8.2. Radiated noise

The radiated noise of air volume controller is listed in Tab. 8.2.1.

\dot{V} [m³.h⁻¹] - air flow volume

Δp_{st} [Pa] - pressure differential

L_{WA} [dB(A)] - total level of acoustic power

corrected by filter A

Tab. 8.2.1. Sound power level radiated outside the pipeline - without insulation

Size [mm]	\dot{V} [m³.h⁻¹]	L_{WA} [dB(A)]		L_{WA} [dB(A)]		L_{WA} [dB(A)]

8.3. Radiated noise - with insulation

The radiated noise of air volume controller is listed in Tab. 8.3.1.

\dot{V} [$m^3 \cdot h^{-1}$] - air flow volume

Δp_{st} [Pa] - pressure differential

L_{WA} [dB(A)] - total level of acoustic power

corrected by filter A

Tab. 8.3.1. Sound power level radiated outside the pipeline - with insulation

Size [mm]	\dot{V} [$m^3 \cdot h^{-1}$]	L_{WA} [dB(A)]			
		$\Delta p_{st} = 50$ Pa	$\Delta p_{st} = 100$ Pa	$\Delta p_{st} = 250$ Pa	$\Delta p_{st} = 500$ Pa

IV. VENTILATION SYSTEMS

9. Ventilation systems with controllers RPM-V

9.1. Air volume control with using of wall mounted positioner for modulating damper actuators CRP24-B1.

Pic. 43 Positioner CRP24-B1

Tab. 9.1.1.

Positioner	CRP24-B1
Nominal voltage	AC 24 V, 50/60 Hz / DC 24V
Dimensioning	0,7 VA, without actuators
Power supply range	AC/DC 19.2 ... 28.8 V
Connections	Terminal block 1 ... 3: 2,5 mm Terminal block 4 ... 8: 1,5 mm
Output	Control signal Y: 0/2 ... 10V, max. 1 mA
Degree of protection	IP 30
Protection class	III (Safety extra-low voltage)
Temperature/humidity – Operation	0...+50 °C / 20 ... 90% r.h. (non-condensating)
Temperature/humidity – Transport and storage	-25...+70 °C / 20 ... 90% r.h. (non-condensating)

Further information on the possibilities of use mentioned is listed in the catalog of the company Belimo.

9.2. Ventilation systems HRSM, HRSM-K

Description

Mandík VAV regulating systems HRSM and HRSM-K are designed for simple and optimal regulation of air quality in family houses, apartments (including kitchen exhaust), office buildings with conference rooms or industrial premises with centralized ventilation systems.

The air regulating systems HRSM/ HRSM-K are designed as "demand-based control systems". The VAV dampers are not depending on air pressure in the duct. They can be used also as constant flow regulating dampers, when needed. The HRSM/ HRSM-K systems are operated by electrical boxes DC1/respectively DC2 and controlled by 3 positions wall switch.

The HRSM-K is connectable to kitchen hood exhaust, which is equipped with micro switch. The HRSM-K ("kitchen") allows to increase air volume in the supply ducts and consequently to decreases air volume in the exhaust ducts, when kitchen hood is in operation. It means that the kitchen hood is extracting the air with its own fan.

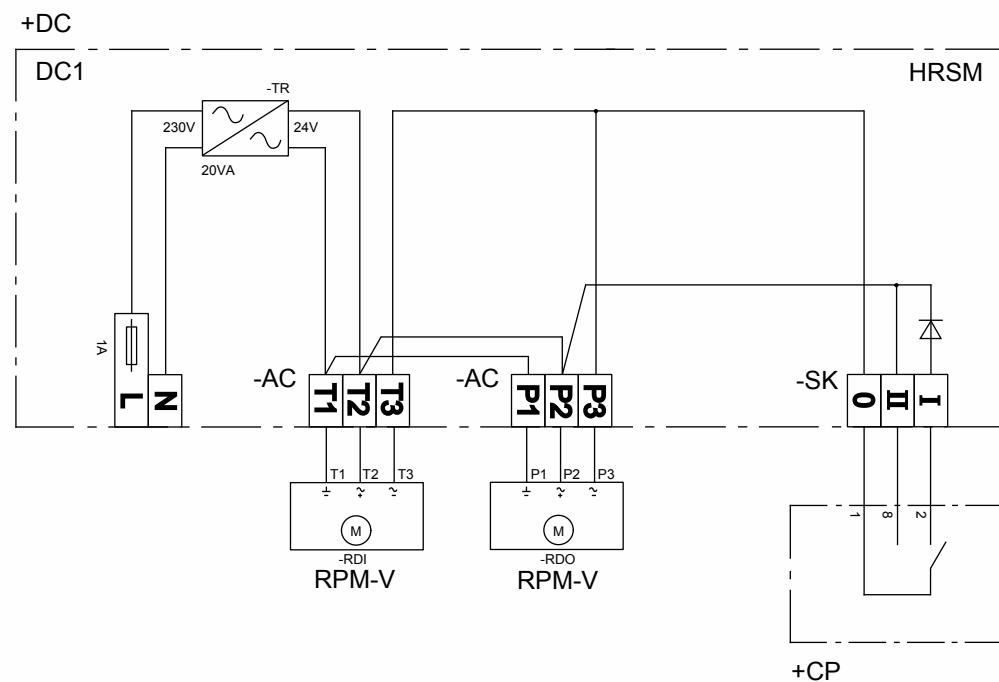

Switch positions:

- Damper's blade in closed position
- Minimal air flow volume position
- Maximal air flow volume position

V. MATERIAL, FINISHING

10. Material

10.1. The body of the controller and the controller blade are made of galvanized sheet. The blade is furnished with a silicon seal along its periphery. Controllers are with rubber tightness and glued all the way around. The controller is delivered without further surface treatment.

10.2. According to the customer's requirements, damper can be made of stainless material.

Specifications for stainless-steel models – classification of stainless steel:

- Class A2 – Food-grade stainless steel (AISI 304 – ČSN 17240)
- Class A4 – Chemistry-grade stainless steel (AISI 316, 316L – ČSN 17346, 17349)

The indicated metal is used for all metal components of the damper except the servo drive and its adapters.

The following components, including the fasteners, are made from stainless steel at all times:

- 1) Damper body and all components permanently attached
- 2) Leaf pins, metal components of the leaf
- 3) Pressure sensors inside the damper
- 4) Controlling components outside the damper (levers, control levers, metal part of the pin or the entire pin)
- 5) Servo drive mount
- 6) Insulation sheeting, if the damper is insulated

Plastic, rubber and silicon components, sealants, servo drives, and end switches are identical for all material variants of the dampers.

Some fasteners and components are available in one class of stainless steel; the type will be used in all stainless-steel variants.

Any other requirements for the design shall be considered atypical and shall be addressed on an individual basis.

VI. INSPECTION, TESTING

11. Inspection, testing

11.1. Dimensions are checked with standard gauges in accordance with the tolerated dimension standards used in air conditioning.

VII. TRANSPORTATION AND STORAGE

12. Logistic terms

12.1. Regulators are transported by box freight vehicles without direct weather impact, there must not occur any sharp shocks and ambient temperature must not exceed +40°C. Regulators must be protected against mechanic damages when transported and manipulated. During transportation, the regulator blade must be in the "CLOSED" position.

12.2. Regulators are stored indoor in environment without any aggressive vapours, gases or dust. Indoor temperature must be in the range from -5°C to +40°C and maximum relative humidity 80%. Regulators must be protected against mechanic damages when transported and manipulated.

VIII. ASSEMBLY, ATTENDANCE, MAINTENANCE AND REVISIONS

13. Assembly and set up

13.1. All effective safety standards and directives must be observed during air flow controller assembly. The assembly consists of installing the controller in the air distribution system and if required, connecting the actuating mechanism to the electric net.

13.2. The reset of values \dot{V}_{\min} a \dot{V}_{\max} can be done by service tool ZTH-EU, which is designed for all Belimo actuators with interface contain PP (MF, MP, LON, ...). Connection to actuator via service socket. Actuators can be adjusted and controlled over Plug and Play drives.

Setting can be made with the setup and programming software PC-Tool, that can be installed on a standard PC. The PC is connected to the actuator via the service socket.

Use the Belimo Assistant App, an app available for Android smartphones from version 4.4 and for iPhone devices with iOS 9 or later. This app can only be used with a Belimo device that has a built-in NFC interface. The iPhone device requires a NFC converter ZIP-BT-NFC. This device can also be used for an Android device that does not support NFC.

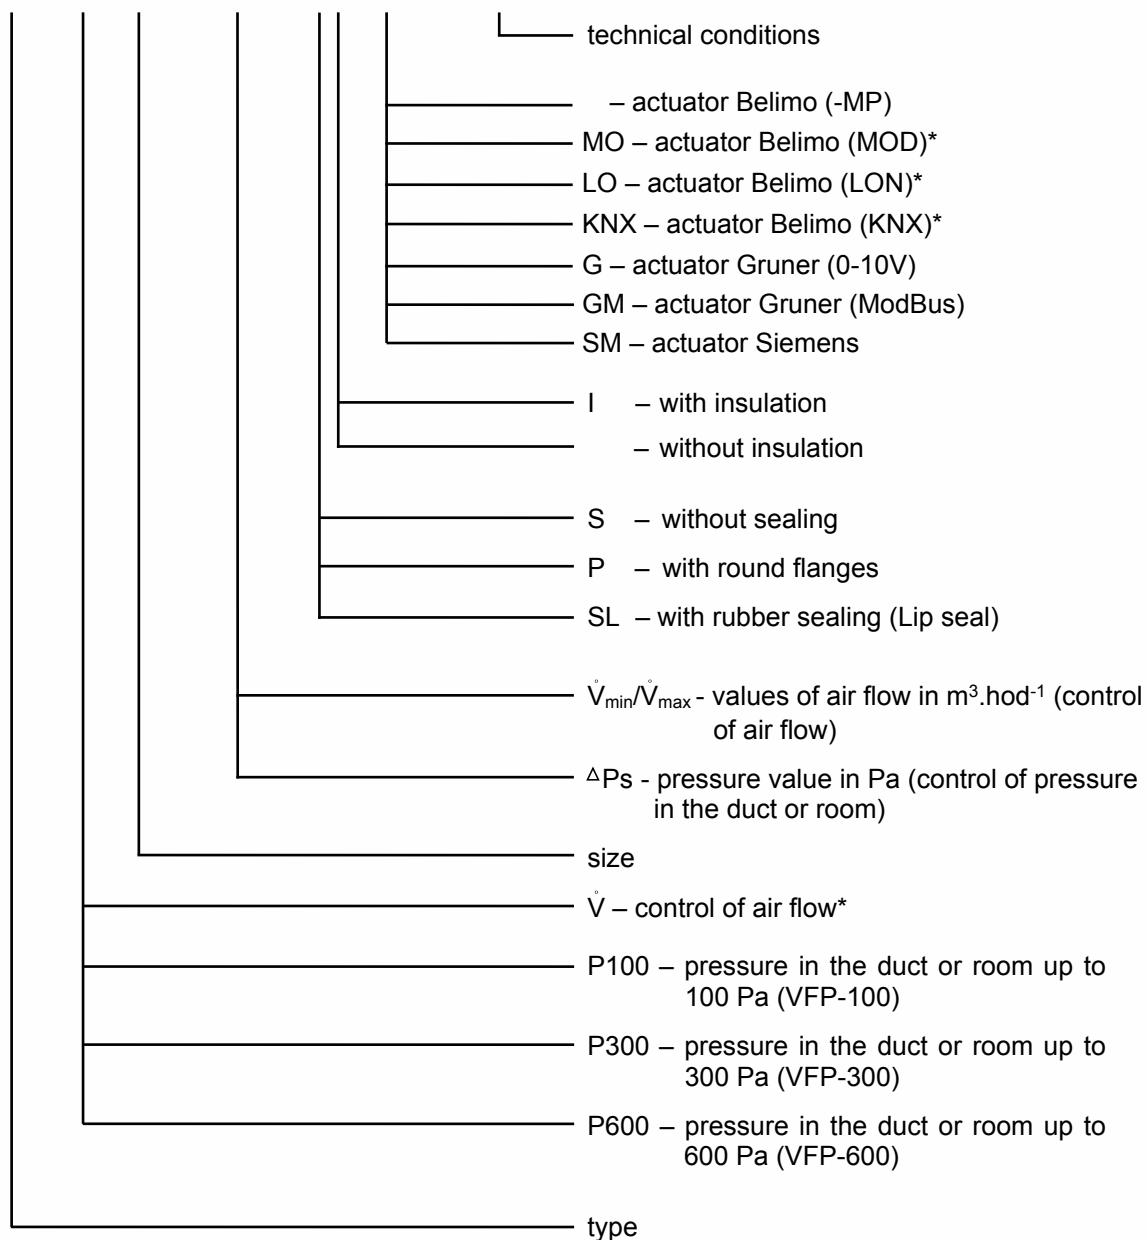

More detailed information about the manners of resetting mentioned can be found in the catalog of the company Belimo.

IX. ORDERING INFORMATION

14. Ordering key

14.1. Controller RPM-V

RPM-V / V 160 200/800 P/I MO TPM 085/12

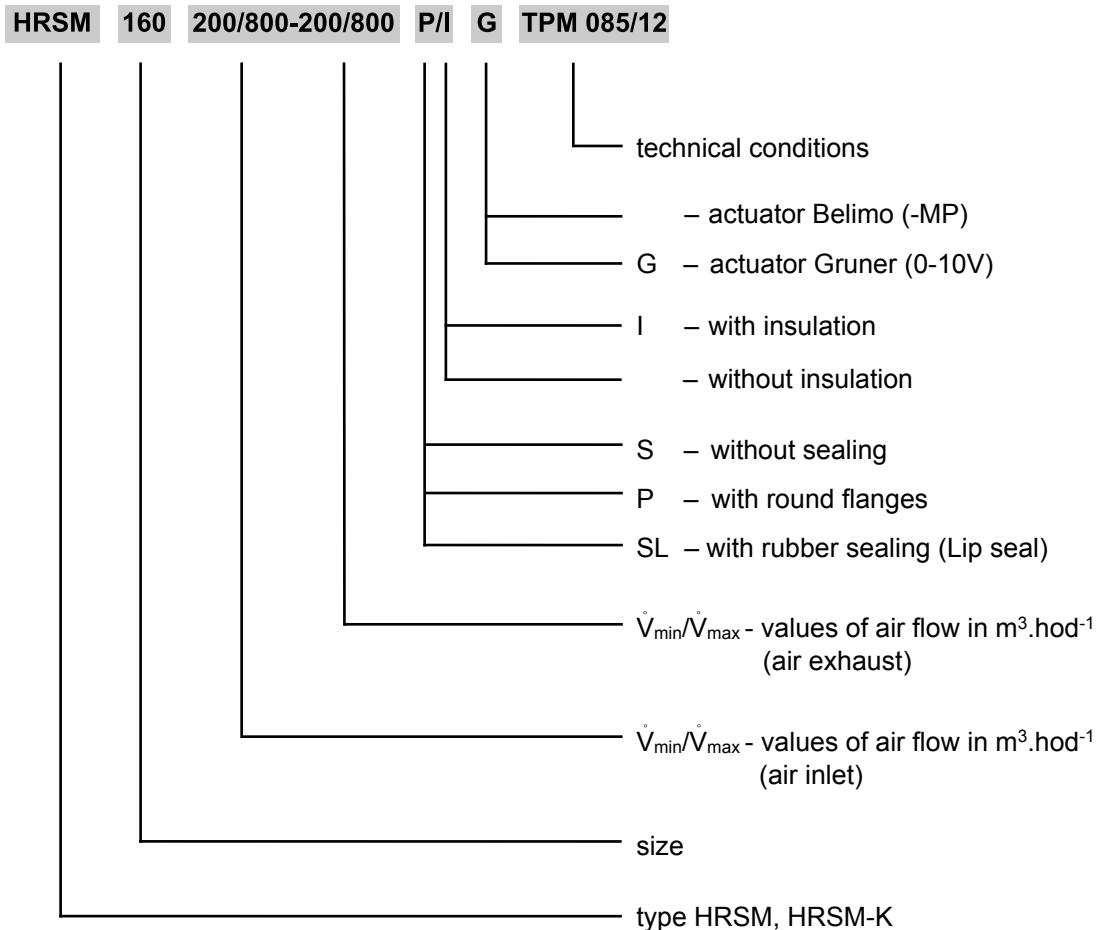

The standard operating mode is set for DC 2...10 V. If is it requested by customer, it can be set for DC 0...10 V.

The values of air volume \dot{V}_{\min} a \dot{V}_{\max} will be set by the manufacturer according to the customer's order. These values can be subsequently reset by means of the instrument ZTH-EU, or by the PC software PC-Tool or via the Belimo Assistant App.

The value for the pressure (for control of pressure in the piping or in the room) will be set by the manufacturer according to the customer's order. This value can be subsequently reset by means of a potentiometer on the controller VRP-STP in the range of 30..100 % of the value set by the manufacturer.

* For size 630 is controlling via MOD, LON and KNX not available.

14.2. Ventilation systems HRSM, HRSM-K
