CHARACTERISTICS:

Terminal box for semi-absolute and absolute filters, suitable for installations both for unidirectional flows and for high induction turbulent flows.

CONSTRUCTION:

Mixed construction made from an extruded RAL 9010 painted (other colors on request) aluminum structure attached to an ABS plenum complete with side spigot for the introduction of the air to be treated. The filters that can be housed have a classification from E10 to H14 according to the EN 1822:2009. A special feature of the terminal is the integration of the seal control system for the gasket or fluid coupling (DIN 1946-4) which allows an easy and quick verification of the correct assembly of the filtering element. The box is also equipped with a flow control damper, which can be operated from the clean area of the room, and by a door for checking the pressure drop and for sampling the photometric test tracer.

UTILIZATION:

Suspended ceiling installation both in support and suspension. Application in areas with controlled contamination, gray rooms, clean rooms, operating rooms of ISO 7 class (ISO 14644) and ancillary areas of operating blocks.

AIR FLOW RATE:

- 425m³/h for unidirectional flow
- 700 for high induction flow
